SEACOLOGY AROUND THE WORLD
 257 projects in 55 countries on 155 different islands • Nearly 1.3 million acres protected
 23 field representatives, four international affiliates, seven full-time staff

COVER: Overlooking Bacuit Bay, off the Philippines' Palawan Island. Photo by Mary Randolph.

Seacology is dedicated to protecting island environments around the world.

Why islands?

The extinction crisis facing ecosystems around the world is most threatening on islands, where over half of all animal extinctions in the past 500 years have occurred. From coral reefs to mangrove forests, the world's islands house a multitude of unique habitats and wildlife.

At the same time, island communities are under increased pressure to boost economic development even at the cost of environmental damage. As many of the world's most vulnerable islands are also among the smallest, these ecological gems are often overlooked.

Our win-win approach tackles both environmental threats and humanitarian challenges, creating marine and terrestrial reserves on islands while improving the quality of life for the surrounding community.

We find solutions by asking islanders to identify a communal need Seacology can provide, such as a school or a freshwater-delivery system. In exchange, the village agrees to protect a nearby marine or terrestrial area.

Seacology staff and Board members meet with an indigenous community on Moorea, French Polynesia.

Message from the Chair

Seacology is a small charity with a big mission: we aim to save island habitats and cultures throughout the world.

Islands are the greatest treasure chests of biodiversity we know of. In some island ecosystems, a majority of the plants and animals are endemic—found nowhere else—and island flora and fauna have the highest known rates of extinctions.

Our way of protecting island habitats is simple, but highly effective. We partner with indigenous people to build a village school, or medical clinic, or other needed public work in exchange for the villagers protecting their rainforest, coral reef, or other precious habitat.

Seacology's unique approach has saved precious island environments in 155 islands in 55 different countries.

We believe in a win-win-win approach to environmental conservation: indigenous people win not only a needed public work, but an increased sense of worth and dignity. Our donors win, knowing that their gifts are used in an extraordinarily efficient way to achieve major humanitarian and environmental goals. And the world wins by having precious island habitats protected by those who know and love them the most, villagers whose links to the forests and marine resources stretch back for generations.

Whether you be a Seacology donor, an island leader, a foundation executive, or just an interested citizen of the world, we welcome your interest in Seacology. Thank you for joining with us to save some of the world's most precious habitats.

PROJECT UPDATES

CHILE Quinchao

Our partners have completed construction of a visitor center for local women to sell their crafts in exchange for a 100-acre reserve for migrating Hudsonian godwits. We also funded a second project in the community in 2014 to provide security equipment for the facility.

FRENCH POLYNESIA

Moorea

In June, a Seacology expedition visited the island of Moorea to commemorate the opening of *Fare Kimo*, a dormitory we built as an expansion to our earlier facility on Moorea, which was constructed in 2008 in support of a 2,394-acre no-take reserve. The original facility became so popular with children visiting from neighboring islands that the dormitory was needed to accommodate them. *Fare Kimo* was funded and named in memory of former Seacology Board member Kimo Campbell, who passed away in 2012.

Photo by Vineeta Hoan

Kenya

Pate and Wasini Islands

Seacology Field Representative Dishon Lionel Murage, left, meets with fishermen from Wasini Island. In 2014, Seacology funded the building of 100 sustainable fish traps for the fishing communities of Pate and Wasini. Based on a traditional design but constructed with more durable modern materials, these basketlike devices feature “escape gaps,” which allow juvenile fish to swim out of the traps, thus lowering the impact on the fishery’s ability to replenish itself. In exchange for Seacology’s support, the community agreed to support a 1,532-acre sustainable fishing area along the islands’ coasts. More of the sustainable traps are currently being built.

MADAGASCAR

Antanandava

The library and reading room for our earlier schoolhouse project in Antanandava is now complete and furnished. In exchange, the community has agreed to grow and plant native trees in a plot of abandoned agricultural land set aside as a protected area. They have already planted a thousand seedlings grown in a Seacology-funded nursery facility and expect to plant several thousand more this year. Since the community agreement was signed in 2012, none of the protected forest has been cleared or burned.

PHILIPPINES

Bacuit Bay,
Palawan Island

From left, Program Manager Karen Peterson, Jose Alferez from partner NGO the El Nido Foundation, Field Representative Ferdie Marcelo, and Program Manager Mary Randolph. As of the end of 2014, 78 mooring pins, to protect Bacuit's ecosystems from anchor damage, had been installed in this tourism-heavy area off Palawan Island. Our project to provide mooring and marker buoys was launched in support of a network of no-take Marine Protected Areas comprising 2,251 acres of coral reefs and other sensitive habitat. The El Nido foundation is continuing to install more buoys.

TONGA

'Uiha Island

In a massive cyclone last January, the Seacology-retrofitted Felemea community center suffered extensive damage, and had to be rebuilt from the ground up. Seacology's Board quickly approved funding for the project and a brand-new community hall (pictured) was built in record time. A Seacology expedition attended the opening ceremony in August.

Photo by Thomas Baechtold

NEW PROJECTS

Residents of Nanuca village, on the Fijian island of Vanua Levu, meet with guests from a Seacology expedition. Seacology recently approved funding to build a new community center for Nanuca in exchange for 1,342 acres of combined marine and mangrove habitat protection.

ABOUT

'Professor' Shekue

Our 2014 Seacology Prize was awarded to "Professor" Ali Shaibu Shekue from Kenya.

Though not a professor in the literal sense, Shekue is recognized throughout Kenya for his knowledge and skill pertaining to artisanal fisheries. He is among the few remaining old fishermen, and throughout his lifetime he has witnessed people being dispossessed from their fishing grounds and the loss of traditional fisheries management practices. As a result of these changes, Shekue observed a drastic decline in the fisheries' resources, the destruction of habitats, and an increase in illegal fishing activities. Rather than remaining silent, he began working to mobilize local communities and in 2002 the first community-managed marine protected area in Mkokoni, Kiunga was created due to his efforts.

"I thank Seacology for its respect and recognition of indigenous knowledge that exists with the local community who are mostly uneducated and for its keenness to utilize this knowledge to enhance conservation," Shekue said in his acceptance speech.

"I thank Seacology for recognizing us, guiding us, accepting us, and now awarding us for our efforts and determination. This award will encourage the youth to participate in conservation efforts and practices for the benefit of all future generations."

ABOUT THE SEACOLOGY PRIZE

Many foundations recognize exemplary achievements by scientists, educators, business leaders and other individuals who work toward conservation. Seacology has chosen to recognize heroic achievement by people who seldom receive any publicity: indigenous leaders who risk their own lives and well-being to protect their island's ecosystems and culture.

The Seacology Prize is underwritten by Ken Murdock, Vice Chair of Seacology, in memory of his mother, Lalovi Fish Murdock.

From left, Vice Chair Ken Murdock, Chair Paul Alan Cox, Vice President Doug Herst, and President Mike Burbank present the 2014 Seacology Prize to Ali Shaibu Shekue.

BOARD MEMBERS

In 2014, all Seacology Board members made generous personal gifts. Board contributions represent a significant portion of Seacology's total fundraising. We are most grateful for the generosity and leadership of each Seacology Board member.

Seacology is fortunate to receive many gifts under \$2,000. Space limitations prevent us from listing the name of each donor, but we deeply appreciate every contribution to Seacology. Each gift we receive is important to our efforts to protect the world's islands.

Seacology staff and Board members, donors, and members of the local community celebrate the opening of the Seacology-funded crafts center on Quinchao, Chile.

Seacology Island Legacy Society

If you are a Seacology Fellow, a longtime Seacology supporter, or are new to our cause and feel a great affinity for our mission, please consider joining our Island Legacy Society. Members of the Island Legacy Society have made a commitment to protecting islands for future generations to enjoy by making a planned gift to Seacology. To join the Island Legacy Society:

- Make a gift to Seacology in your estate plan through your financial advisor.
- Contact Seacology's Development Department at (510) 559-3505 or islands@seacology.org and we will send you a Letter of Intent to complete and return to us.

On behalf of Seacology's Board, staff, and most especially, the habitats and peoples of the world's islands, we thank the following Island Legacy Society members. Your thoughtfulness and generosity will conserve the unparalleled biodiversity and cultures of islands for many generations to come.

We are pleased to honor the following members of the Island Legacy Society:

It's hardly surprising that sea turtles are in danger of extinction. They are famed the world over for their meat and highly sought after for their eggs, their blood is claimed to have medicinal properties and, unfortunately for them, they are encased in a shell that is used to produce beautiful jewellery and trinkets. Turtles have always been a prized catch; they are lumbering creatures on land that once flipped on their backs are defenceless.

Historically they were kept alive on ships for weeks providing sailors with a great source of fresh meat. Consequently their numbers have been decreasing slowly for over 400 years with laws put into effect in Bermuda as long ago as 1620 to protect "so excellent a fish". More recently, large scale commercial methods of capture (peaking at over 17,000 tonnes in the late 1960s), imprecise fishing methods, and extensive beach development, have left five of the seven species of sea turtle on the International Union for Conservation of Nature's (IUCN) Red List of Threatened Species.

SEACOLOGY

Saving the world one island at a time

Nine villages line a bay on Waigeo Island in Raja Ampat, Indonesia. During a visit by representatives of Seacology, a California-based nonprofit working to protect threatened island ecosystems around the world, one village chief requested paved walking paths. "We thought, what an odd thing to request," said Seacology executive director Duane Silverstein. "But our philosophy is that we'll do what the village wants as long as it isn't a bad thing." Then he learned that village paths become water-filled ruts in the rainy season, which meant paved walkways would help

prevent malaria. The chief later told that the Indonesian government occa the village with projects that the gov the people wanted. "Seacology was it us with what we asked for," the chief That sums up the philosophy of the which was founded in 1991 and now 244 projects in 51 countries on 149 is credit. Seacology provides something as those paved walkways, in exchange promising to protect a specified area villages on Waigeo received a project

GOOD DAY!

AROUND TOWN

WHO'S IN TOWN
 New Yorker cartoonist **Doc Chast** talks about her humorous view of the human condition and her new memoir "Can't We Talk About Something More Pleasant?" (7:30 p.m., Nourse Theater, 275 Hayes St., S.F.)

Lectures
View of Ukraine: Dr. Volodymyr Vykhytil, former president of Latvia, speaks about recent developments in Ukraine and other Eastern European nations. [Noon, Commonwealth Club, 386 Market St., S.F.]

Prize-winning poetry: Joanne Diaz presents her new book of poetry, "My Favorite Tyrants," winner of the 2014 Brittingham Prize in Poetry (7 p.m., Green-Arden, 1680 Market St., S.F.)

Marley connection: Marlan James' latest book, "A Brief History of Seven Killings," is a fictionalized account of a 1976 assassination attempt on reggae singer Bob Marley. (7:30 p.m., Booksmith, 1644 Haight St., S.F.)

Honoring conservation: Ali Shabbu Sheku, an elder in Kenya's fishing community who helped establish a marine-protected area and curb poaching, will receive a \$10,000 prize from Berkeley-based Seacology. (6 p.m., Daniel Brower Center, 2150 Alton Way, Berkeley)

Robot challenges: Patent attorney and former electrical engineer Kevin Roe speaks about meltdowns at the Fukushima nuclear power plant and why robots can't repair the reactors. (6 p.m., Commonwealth Club, 386 Market St., S.F.)

At the colleges
Film fest: "Queer Shorts at SF State" commemorates the 25th annual National Coming Out Day with LGBT-related shorts from San Francisco State faculty and alumni. (5 p.m., Coppola Theater, Fine Arts Building, San Francisco State, 1600 Holloway Ave., S.F.)

Literary events
'Delish' recipes: Food blogger Jess

San Francisco Examiner, Oct 9, 2014
 "Good Day!"

KPFA Radio, Nov 17, 2014

THE SAN FRANCISCO EXAMINER - SFEXAMINER.COM - THURSDAY, OCTOBER 9, 2014

Seacology AWARDS

At the end of the year, Prince Albert II of Monaco named Seacology as a laureate for the 2015 Prince's Prize for Innovative Philanthropy.

The Prince's Prize, now in its second year, is a coordinated effort by the Prince Albert II of Monaco Foundation and the Tocqueville Foundation to recognize charitable organizations that utilize creative approaches to addressing social and environmental challenges.

"Receiving the Prince's recognition is a great honor for Seacology—a small not-for-profit that works with island villages to swap schools, clinics, and water supplies in exchange for rainforest and marine reserves," said Seacology founder and Board Chair Dr. Paul Alan Cox. "On behalf of indigenous conservationists throughout the world, we are thrilled to accept this laureate."

"We all have a duty to ensure the world's ecosystems are protected, and Seacology's commitment to achieving this is highly commendable. Their innovative approach to conservation challenges conventional ways of thinking about development and leads the way in promoting new kinds of philanthropic activities," said HSH Prince Albert II.

"The fact that Prince Albert II recognized our grassroots efforts is extremely gratifying, particularly since the prince has a stellar reputation as a marine conservationist and philanthropist," said Seacology's Executive Director Duane Silverstein.
